

Spring is the best time to topdress your lawn and give it that little extra boost. after the cold and harsh winter conditions.

Step 1: Cut your lawn

For the best results it's a good idea to cut your lawn the day before you plan on applying the topdress mix.

Step 2: Kill Weeds

If you have lots of weeds, make sure you get them under control by treating them with a weed kill. It is important to treat the weeds before applying the topdress otherwise you will just be feeding the weeds.

Step 3: Applying Topdress

When applying topdress you only need to apply a thin layer 10 - 15mm thick, thin enough so the grass still shows through.

Step 4: Watering

Preferably try to avoid walking on your lawn for the first couple of days after applying topdress. After 1-2 days it is good to water the lawn.

Why Do You Need To Topdress Your Lawn?

There are two main reasons why you apply topdress to your lawn; firstly, to give it a boost from the cold harsh conditions of winter. Secondly, to fill in any holes and level out your lawn.

Waratah Landscape Supplies has the perfect product for topdressing any type of lawn. Waratah's Organix Topdress contains all the right nutrients to give that extra boost to your lawn. Call today to place your order!
